Summary

Final-year Cybersecurity student and aspiring Full Stack Developer dedicated to building secure, high-performance web and mobile applications. Driven to combine a passion for software engineering with strong security principles, using logic and creativity to develop innovative, safeguarded technology solutions.

Education

Sri Lanka Technology Campus | Undergraduate

BSc (Hons) in Cyber Security

June 2022 - Present

Skills

Frontend & Mobile

React, JavaScript, Tailwind CSS, HTML5, CSS3, Redux Toolkit, Ant Design

State & Data

Redux, Axios, REST APIs

Backend & Databases

Node.js, Express.js, Python, MongoDB, Firebase, MySQL

Cybersecurity Tools

Burp Suite, Wireshark, Nmap, Maltego, Ettercap

Blockchain Security

Smart Contracts, Ganache, Solidity, AES-256

Tools & Concepts

Git, GitHub, JWT, Machine Learning Integration

Projects

Electronic voting system using Blockchain | Final Year Project | Feb 2025 - Mar 2026

- Architected a secure, dual-layer e-voting platform utilizing a traditional database and Ethereum blockchain for immutable storage.
- Engineered a zero-trust pipeline with AES-256 encryption, dynamic hash validation, and AWS S3 backups to prevent data tampering.
- Integrated Arduino-based biometric authentication and RBAC administrative dashboards to enforce strict, hardware-level election security.

Technologies Used: React, Node.js, Express.js, MongoDB, Solidity, Arduino (AS608 FingerPrint Sensor), AWS S3

ML-Powered Job Recommendation System | Aug 2025 - Sep 2025

- Created a machine learning-based system designed to match users with highly relevant job opportunities.
- Structured the project with separate frontend and backend repositories for better code organization and scaling. Connected the web interface with the recommendation model to display accurate and personalized job results.

Technologies Used: React, Node.js, Express.js, Python, MongoDB

Timetable Scheduler Web Application | Dec 2024 - Jan 2025

- Designed a web-based scheduling application to help users organize daily tasks and automatically prevent time conflicts.
- Built a responsive frontend for seamless schedule management, paired with a robust backend to process scheduling logic.
- Implemented role-based access control (RBAC) utilizing JWT to secure API endpoints and safely isolate user timetable data.

Technologies Used: React, Node.js, Express.js, Tailwind CSS, MongoDB, Socket.io, JWT

Food Ordering Web Application | Nov 2023 - Dec 2023

- Implemented a complete food ordering web platform connecting customers with local menu options.
- Created standard e-commerce features for browsing items, managing a digital cart, and processing user orders. Built a responsive layout to ensure the application works perfectly on both desktop and mobile web browsers.

Technologies Used: React, Node.js, Express.js, Firebase, TailwindCSS, Redux, Stripe

Attendance Recording Mobile App | Jan 2024 - Feb 2024

- Engineered a mobile application to digitize and speed up the daily attendance tracking process.
- Programmed the user interface with React Native to ensure a smooth experience across all mobile devices.
- Set up a secure database connection to record, store, and manage user attendance data efficiently.

Technologies Used: React Native, Node.js, MongoDB, Expo, Axios

Volunteer

ISACA SLTC | Sep 2025 – Present

Publicity Manager (Head)

SEDS SLTC | Jun 2024 – Jun 2025

Satellite and IT Division (Editor)

ISACA SLTC - ZERO-DAY | Feb 2026 - Mar 2026

Promotion and Marketing (Advisor)

Certifications

Python Programming

University of Moratuwa | 2024

Server-side Web Programming

University of Moratuwa | 2024

Front-End Web Development

University of Moratuwa | 2025

Software Quality Assurance

University of Moratuwa | 2026

Python for Beginners

University of Moratuwa | 2025

Web Design for Beginners

University of Moratuwa | 2024
